ULTRASOUND TRAINING PROGRAM
PATIENT CARE EXPERIENCE
UTP2

Sonography students must possess patient care skills consistent with those performed by health care technologists in an acute care setting. Being a post-diploma program, it is assumed that these skills are present upon program entry. Specific patient care skills include communication, patient transfer, basic catheter and intravenous care, bedpan and urinal use, sterile technique, oxygen set-up, patient safety, and respect for patient diversity and confidentiality. The most competitive applicants have recent (within three years) patient care experience as described above. Other patient care experiences are considered.

Describe your experiences below. Be sure to include the following:

- ' Dates and length of the experience
- ' Patient care environment (i.e. acute care, extended care, outpatient, volunteer)
- ' Specific tasks performed

Please sign and date the form.
